

RESEARCH INTERESTS

Multimodal large models (vision + language); LLM-based agents, tool-use, planning and reasoning; multi-agent systems and strategic interactions; explainable AI and medical AI applications.

EDUCATION

MSc Artificial Intelligence – Lancaster University

Sep 2025 – Sep 2026

Average-to-date: 79.4% (Distinction, indicative). Modules: Machine Learning, NLP and Language Models, Intelligent Agents and Autonomous Systems, Advanced Topics in AI, Data Science and AI Fundamentals.

BSc Computer Science (Hons) – Aston University

Sep 2021 – Jul 2024

Second Class Honours. Selected higher-mark modules: Mathematics (79.00), Human-Computer Interaction (69.95), Team Project (63.66), Internet Applications & Database Design (61.92), Image & Video Processing (61.00).

RESEARCH & PROJECTS

Toward Explainable Face2Gene Diagnosis

Jun 2026 – Sep 2026

MSc Dissertation – Lancaster University; supervised by Dr. Richard Jiang

- Developed a reproducible coarse-ROI Anatomical Evidence Vector (AEV) pipeline for explainable facial phenotyping, converting occlusion-based model behaviour into quantitative ROI-level evidence for low-resolution 32 × 32 facial images.
- Built a dependency-light NumPy MLP workflow on Face2Brain / PD-DBS face data, covering data loading, QC, calibration, ROI masking, FDR-corrected statistics, leakage/confounding audits, and robustness checks.

Neglected Tropical Disease Clinical Trials Analysis

Sep 2025 – Dec 2025

SCC.450 Introduction to Artificial Intelligence and Data Science – Lancaster University

- Led data cleaning for 315 WHO ICTRP trial records across 62 countries; built logistic regression models, sponsor–country–disease network analysis, and publication-quality visualisations.

Image Classification & Clustering Analysis

Sep 2025 – Present

SCC.451 Machine Learning – Lancaster University

- Applied transfer learning and fine-tuning with ResNet50, DenseNet121, and DINOv2 for image classification; used K-means and hierarchical clustering with PCA on climate data.

Diversity Beats Strength? Multi-LLM Teams in Game-Theoretic Settings

2025 – 2026

SCC.452 Intelligent Agents and Autonomous Systems – Lancaster University

- Implemented and configured simulations for a modular multi-LLM evaluation architecture, testing GPT-4o, DeepSeek-V3, and Gemini-3-Flash across Prisoner’s Dilemma, Snowdrift, and Stag Hunt.
- Ran and organised experimental outputs for approximately 6,400 trial simulations, analysing cooperation, payoff, cheap-talk communication, memory effects, network topology, and team-composition behaviour.

Sentiment Analysis across Multilingual Datasets

Sep 2025 – Present

SCC.453 Natural Language Processing and Language Models – Lancaster University

- Compared tokenisation, stemming, and lemmatisation strategies for English and Chinese sentiment classification, evaluating their impact on model accuracy.

Restaurant Back-Office Management System

2023 – 2024

BSc Individual Project – Aston University

- Developed a restaurant backend/admin management system as the final-year individual project, focusing on core management workflows for restaurant operations.

PC Components E-Commerce Website

2022 – 2023

Team Project – Aston University

- Built a team-based e-commerce website for selling PC components, contributing to requirements, implementation, testing, and project delivery.

TECHNICAL SKILLS

Languages:	Python, SQL, Java
ML / DL:	PyTorch, scikit-learn, NumPy MLPs, transfer learning, clustering, classification, model evaluation
NLP / LLMs:	Text preprocessing, LLM API integration (OpenAI, Anthropic, Google)
Data / XAI:	pandas, NumPy, matplotlib, seaborn, NetworkX, occlusion analysis, calibration, AUROC/AUPRC evaluation
Tools:	Git, Linux, Jupyter, LaTeX

ADDITIONAL INFORMATION

Nationality: Chinese Languages: Chinese (native), English (fluent)
